Compact Digital Swing Weight Scale

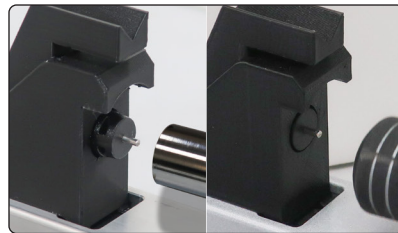

A digital swing weight for the hobbyist and the occasional club maker that demands both speed and accuracy with the upmost reliability in a compact, portable and affordable package. Built around our original design using quality components and precision electronic, this scale produces fast and stable readings for both swing weight and total weight to within 1 gram and 0.5 SW and can manage both gripped, un-gripped clubs as well golf club components and the smaller parts commonly used for swing weighing golf clubs.

Key Features:

- Measures swing weights using industry standard 14" fulcrum.
- Measures total weight and component weight to 1 gram.
- Measures swing weight to 0.5 SW.
- Custom built electronics for the utmost reliability.
- Compact foot print for portability and easy storage.
- No fiddle push button operation.
- Large LCD screen
- Shock proof and spill proof all Steel frame.
- No "bounce" fulcrum-ed weighing beam.
- Stable, no skid frame.
- Easy External calibration.
- Calibration standard included.
- Standard USB adapter and cable.
- External battery power (not included).

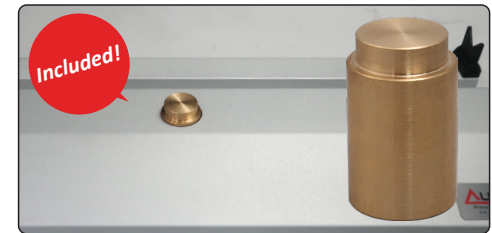

▲ Components are weighed on top of the grip stop to 1 gram precision

▲ Pre-assembled grippless clubs can also be swingweighted before final assembly.

▲ Swing weight is displayed in 0.5 SW point increment

▲ Weights stored in the fuselage

▲ 250 grams Calibration standard
