Club Maker's MPS swing weight scale

Introducing the Clubmaker's Mass Property Scale "MPS" – a groundbreaking solution for clubmakers exploring comprehensive club fitting and clubmaking options that seamlessly integrate Swing-weighting and MOI matching. This OEM-proven productivity instrument merges total weight, swing weight, weight distribution, and balance point measurements into a unified dataset, offering clubmakers valuable insights into the intrinsic power and playability of the scrutinized club.

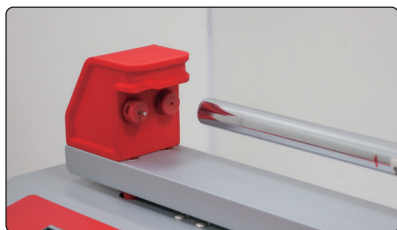

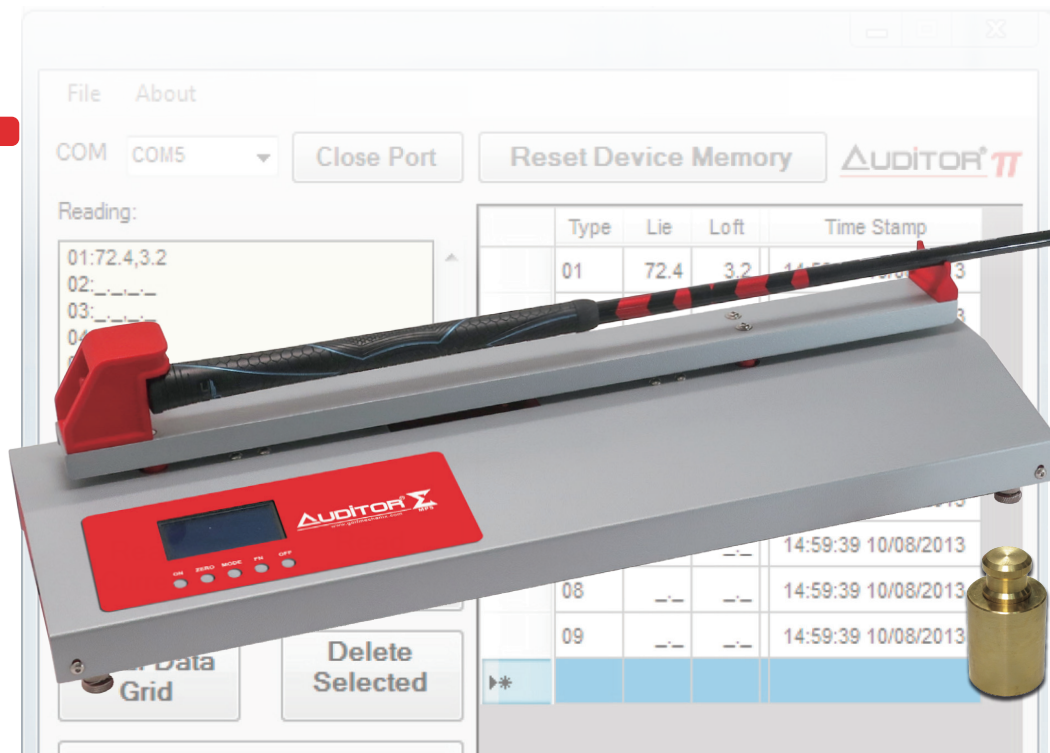

When MOI is a critical consideration for both players and clubmakers, the Clubmaker Auditor MPS Swing Weight Scale significantly simplifies component selection and assembly, facilitating the creation of clubs with the perfect MOI for optimal performance.

Key features:

- Mass Property Scale combines swing weight, total weight and balance point measurements into one single reading
- Provide insights into a club's weight distribution and effect of component weight on swing weight and MOI
- Speeds up club build to a target swing weight and MOI
- Provides accuracy to within 0.1 gram for weight and total weight.

- Provides swing weight accuracy to within 0.1 Swing weight point
- Provides balance point accuracy to within 1mm
- QR code data collection bridge to Mobile Apps for IOS/Android
- No wait fast damping read out
- Automatic internal calibration
- Calibration standard included

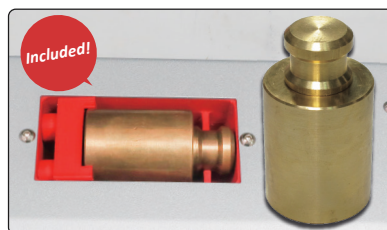

- Bullet proof custom electronics (life time warranty)
- High precision commercial grade load cells
- Compact foot print
- Rugged all steel construction
- Oven baked "wet" Epoxy finish.

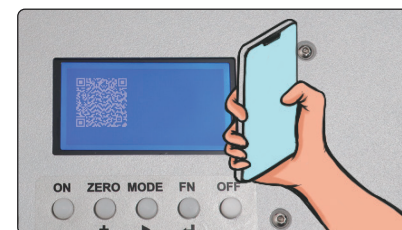

▲ Wide back stop with built in grip cap compensator for pre-assembled gripless clubs.

▲ Grip centering back stop ensure consistent club positioning

▲ Reliable physical external calibration. Calibration standard included.
