

110210-XP

Roll'On Geared Grip Tape dispenser

Rolling grip tape onto a shaft is an old technique used by senior clubmakers: the shaft is rolled directly over a piece of grip tape resulting in a seamless and creaseless application without dirtying the hands! We're bringing this technique back by integrating a "rolling bed" directly into the structure of the tape dispenser which was designed for this very purpose. If having creaseless tape, clean hands and reduced clutter is high on your wish list, this tape dispenser is for you!

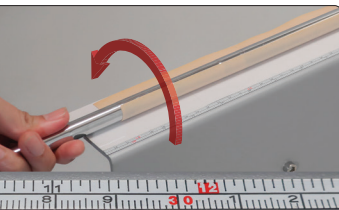

▲ Sharp cutting blades help cut through the tape quickly

▲ Tape is pulled out and rested on the non-stick rolling platform.

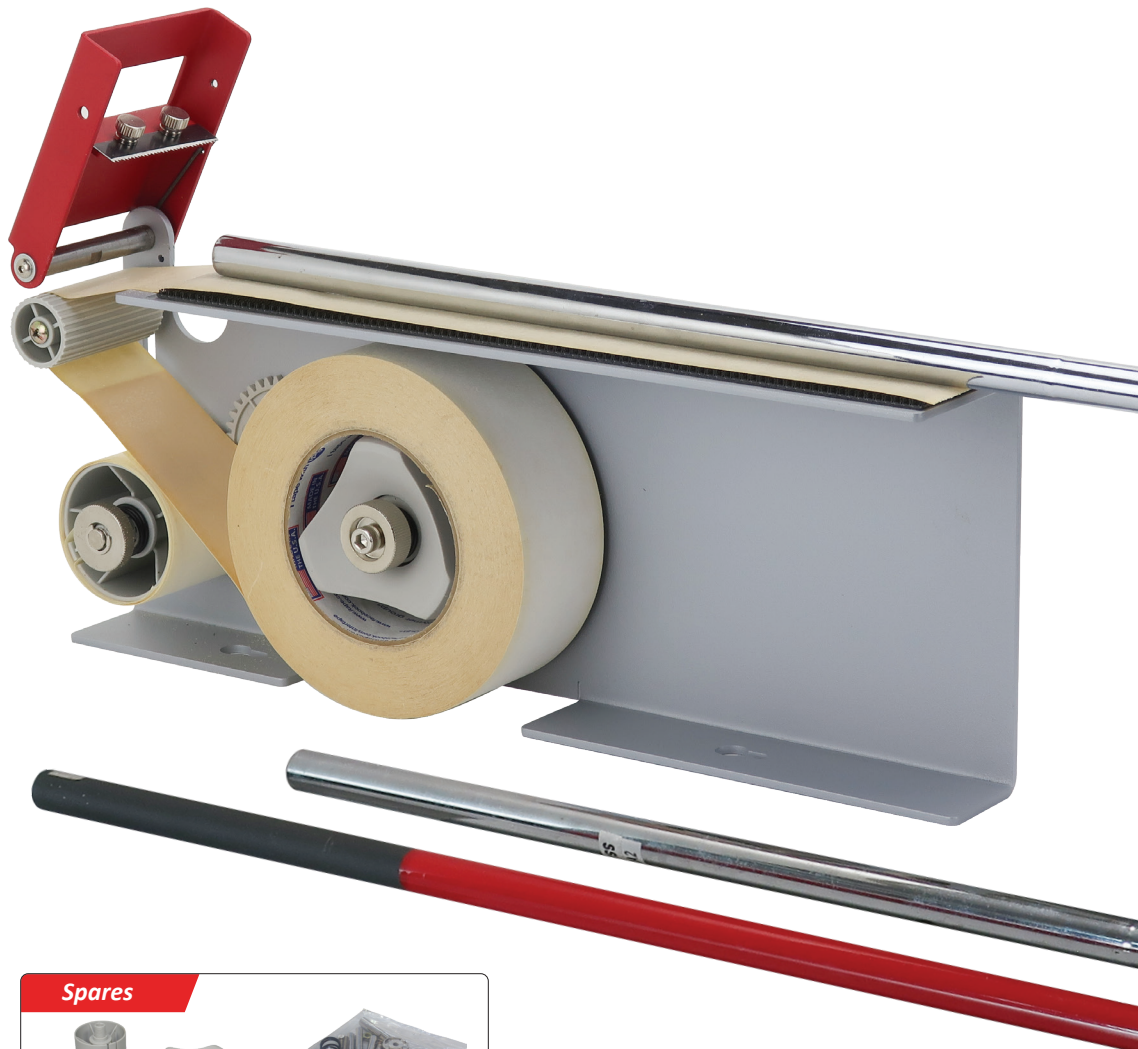

▲ Easily roll cut tape onto the shaft directly on the non-stick platform

▲ Pliable rubber material enhances the gripping firmness of the golf club.

▲ This model does not include the geared tape metering feature; If that is required, see 110220-XP
