

110220-XP

Roll'On Metered & Geared Grip Tape Dispenser

Rolling grip tape onto a shaft is an old technique used by senior clubmakers: the shaft is rolled directly over a piece of grip tape resulting in a seamless and creaseless application without dirtying the hands! We're bringing this technique back by integrating a "rolling bed" directly into the structure of the tape dispenser which was designed for this very purpose. If having creaseless tape, clean hands and reduced clutter is high on your wish list, this tape dispenser is for you!

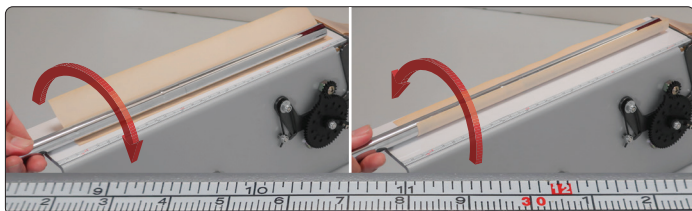

▲ Sharp cutting blade helps cut through the tape quickly

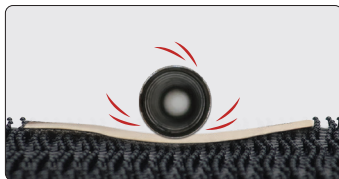

Tape length control

- Set cog to the desired tape length
- Pull tape until the gears lock
- Plunge the cutter to sever the tape
- The drive resets itself for the next run

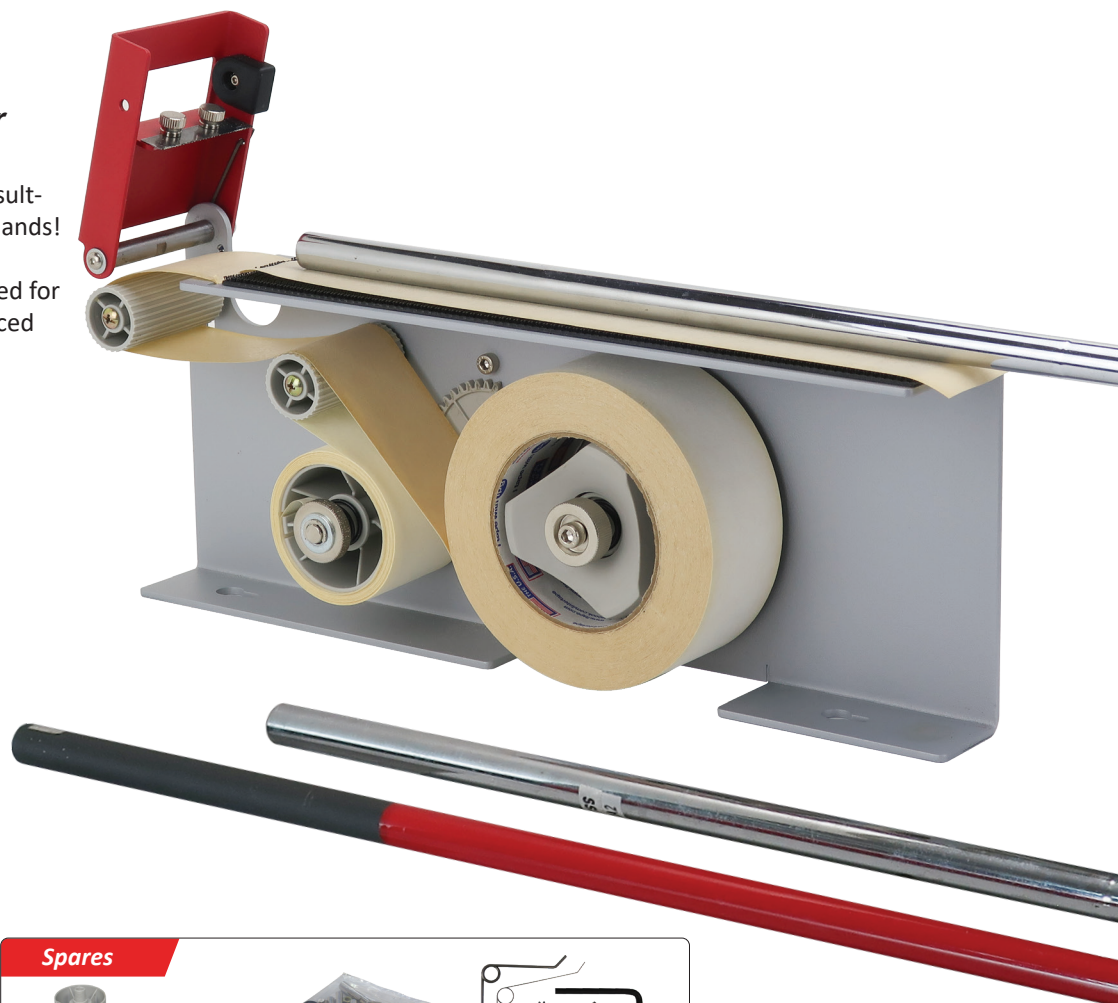

▲ Easily roll cut tape onto the shaft directly on the non-stick platform

▲ The pliable rubber material enhances the gripping firmness of the golf club.

▲ This model has the geared tape metering feature; for the regular model, see 110210-XP
