GOLF MECHANIX® 150610

Classic compact Bending Bar

A classic bending bar with a proven compact frame design with slanted brass jaws. The slant places the hands above the hosel for better leverage. Brass is chosen for its non marring qualities, medium hardness and ductility.

This adjustable light weight bending bar is heat treated for moderate strength and is best used for irons made of soft 8620 carbon steel or 304 Stainless. This bending bar is 18 inches long.
