

## Clubmaker Classic Swing Weight Scale

The preferred choice of custom clubmakers and refined over a period of nearly two decades, this classic swing weight scale offers clubmakers the ability to weigh components and swing weigh pre-assembled as well as assembled clubs to industry standard tolerances to a good level of accuracy.

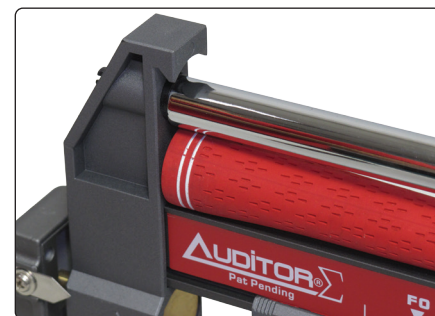

The key distinguishing feature of this design is the ability to swing-weigh grippless clubs while compensating for grip cap thickness, and the ability to mount a grippless club over the weighing beam, so that it can be measured accurately.

### Key Features:

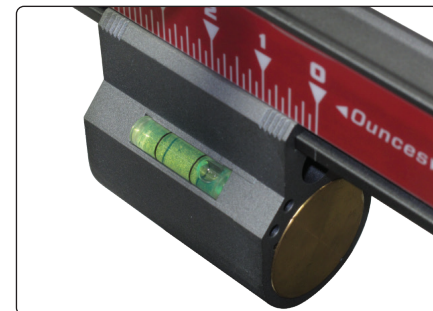

- Industry standard Lorythmic 14" swing weight scale.
- Measures swing weight from A0 ~F 5 in 1/10 increment
- Measures static weight to 600 grams in 5 gram increment
- Built in grip cap compensator for grippless clubs
- Fast damping beam design measures in less time
- Leveling feet with non skid pads.
- Leveling bubble level on base
- Balance indicator built into beam.
- Electronically calibrated.
- Maintenance free design.

▲ Retractable grip cap compensator

▲ Swing weighing grippless clubs with the built in grip cap compensator

▲ Beam level indicator built into the counterpoise improves accuracy and speed.

▲ Weighing club components in both grams and ounces to industry standard tolerances.
