

Ferrule Trimmer

A simple and efficient tool that enables clubmakers to turn down ferrules flush to the hosel without the need of a belt sander. This tool works like a lathe. The club is secured in a V nest with the blade overlapping the ferrule and shaft. The club is spun by hand clockwise against the blade, shaving a thin layer of material with each turn. Thumb pressure against the blade holder controls material removal thickness.

After thinning down the ferrule flush with the hosel, rubbing it with a lint free cloth dipped in acetone is enough to restore the shine.

Spare blades 3 ea.
