

130700 Mr T Universal Ferrule Tool

A small hand-tool designed for installing ferrules of any size. This tool features a comfortable moulded T-handle and a soft non marring ferrule seat. This arrangement works much better than hammering down a ferrule with an insertion tube!

To install ferrule, place the butt end of the shaft on the floor and drive the ferrule on by hand; it will stop one inch from the tip. Then use the hosel of the club-head to drive the ferrule down the shaft tip penetration depth.

- Works on all conventional iron and wood shaft tips (.335" to .370") including tapered irons shafts.

- 1-Mount the ferrule over the shaft tip lightly.
- 2-Sit the tool over the ferrule and push down as far as it will go.
- 3-Finish off by pushing down to the correct depth
