

Short Hosel Bending Bar

The short hosel bending bar is made for hosels as short as 3/4". Its used on woods with a bendable hosel, hybrids and irons produced from mild alloys.

This design distinguishes itself by the short span of its cantilevered, concave sheaves which support the hosel at the lowest point on the neck and heel to prevent pinching. The slanted compact narrow frame with a round entry makes this 20 inch long short hosel bending bar highly tractable.

Spares

Please note:

The high tensile bolts retaining the sheaves in place must be replaced at the first sign of yielding.
