A selection of the most essential tools needed to prepare and assemble components into golf club set to a good level of craftsmanship, playability and fit.

Whether you are complete novice or a serious tinkerer with passion for golf, This compact and well thought-out tool kit set covers all the basics of club making for a fun and rewarding experience.

All you need to get started is a small work-top, a set of inexpensive golf club components and few minutes on You Tube to grasp the basics of club-making! In just few short minutes you will be able to:

- Measure the lie, loft and length of assembled golf clubs
- Measure raw shafts, mark tip and butt to trim to spec.
- Tip trim and butt trim both steel and graphite shafts
- Prep the shaft tip for bonding
- Install and thin down ferrules to size
- Swing weight partially as well as fully assembled clubs
- Grip newly assembled golf clubs and re-grip old ones.
- Kit includes a grip knife, grip installer and a grip tape remover. Solvent catch pan included.

Enjoy the benefits of assembling your own golf clubs to your swing characteristics and have fun doing it!
