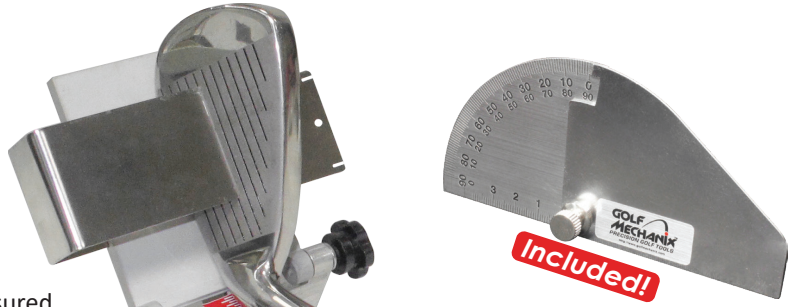
R&A USGA

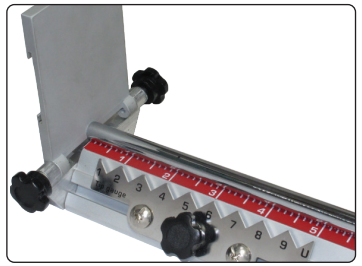
"True Length" tipping ruler

An essential quality control tool and a clubmakers "dream" ruler that has all the functionality needed to measure and setup a whole set of shaft for butt and tip trim to a specific playing length in matter of minutes using the calibrated sliders built on the side of the ruler.

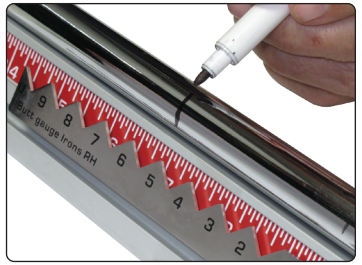
Clubs including pre-assembled ones can be measured accurately to the desired playing length prior to butt trimming using the lie angle soling plate and guide.

Unique to this design; the ruler is produced from a custom extrusion featuring a deep Nested V that guide the shaft or club to prevent rolling while minimizing length wise misalignments.





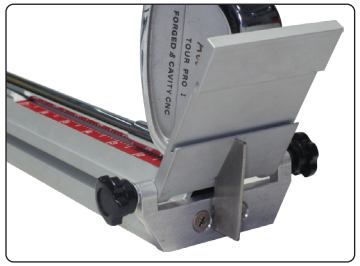
▲ Set the gauge at the desired tipping increment for the driver or lead iron, and mark the shafts one at a time using the guide.



▲ Set the butt trimming gauge to the desired playing length for the driver or lead iron, pre-assemble the club and adjust for lie before transferring butt trim to shafts

Key Features:

-Marks a whole set of custom fit shafts consistently at 1/2" increment
-Error free setup of trimming guides to the desired playing length
-3 Trimming guides provided for irons, Woods and utility clubs.
-Trimming guides work on right handed as well as left handed clubs.
-Measures the lie and loft angle of golf clubs.(with alignment aid)
-Measures club length to the R&A and USGA specifications
-Heavy duty extrusion has a V-through to restrains shafts from rolling
-Measure the length of golf clubs and shafts up to 48" long.
-Ideal for aligning spine marks and logos
-Easy to setup and use. Weighs over 2 Kg (4.4Lbs) will not creep!
-More reliable than the proverbial yard stick!



▲ Measures clubs and pre-assembled clubs to playing length prior to trimming. Measures club length to the R&A and USGA 60o rule.

▲ Lie & Loft can be easily and accurately measured

▲ Nested V-through aligns and restrains club or shaft over ruler to prevent rolling.
