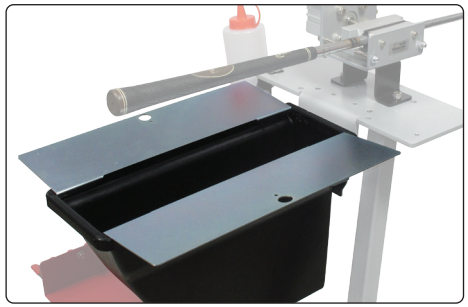
GOLF MECHANIX® 110730

Grip Dip Solvent Recovery Pan

A Solvent recovery pan well suited for high volume gripping where the shaft butt ready for gripping is dipped directly into the solvent to wet the grip tape.
This is a potentially huge time saver for the volume assembler.

The deep and narrow pan design is good for minimizing solvent use and the containement spill flaps double up as a cover to minimize evaporation when the unit is not in use.

The Grip Dip Pan comes with an installation bracket that mounts on a bench or can be retrofitted to an existing gripping station or vise.

Key Features:


-Deep and narrow solvent pan minimizes solvent use.
-Large steel spill flaps minimize splatter and evaporation
-Quick grip dip method saves grip installation time.
-Bracket mounts to a bench or existing gripping vise.
-Drain spout, hose, bracket and screws included in the kit
