GOLF MECHANIX® 110800

Classic Blade Style Grip Remover

Developed as a safe alternative over pressurized solvent “grip shooters” and compressed air, the Classic Blade Grip Remover allows club-makers to re-use rubber or composition grips when counter-weighing, butt trimming, extending, or swing weighing golf clubs.

Made of cold rolled and heat treated spring steel, the blade features round edges and a V shaped channels that funnels solvent between the shaft and grip walls to loosen up the grip tape .
