GOLF MECHANIX® 110875

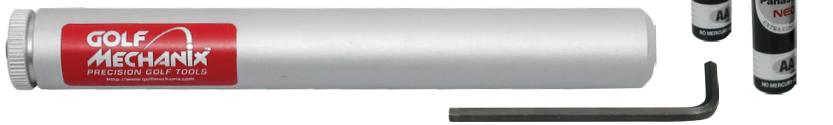
Vise clamp Gripping Laser Type 2

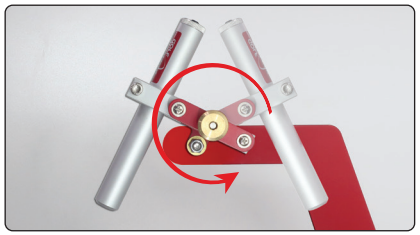
A universal grip aliment laser powered by two industrial grade diodes producing a super bright trace that projects down the shaft centreline to aid with grip alignment.

The pod installs directly on top of the vise clamp just few inches above the grip with the trace projecting fore and aft along the length of the club. This system greatly reduces the need for re-centering the trace over the club repeatedly.

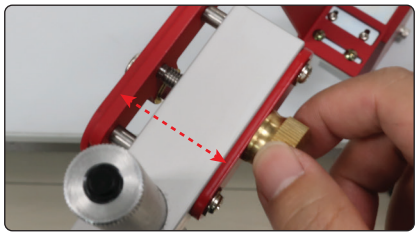
Key features:

- Productivity upgrade for all Golfmechanix 1006XX gripping stations fitted with a laterally mounted side clamp.
- Kit easy to retrofit using just two Allen key wrenches
- Swivel clamp allows laser to project fore or aft of the clamp.
- Ability to focus the laser to infinity for a sharp crisp trace.
- 24 hours operation with just two AA batteries.
- May require center line adjustment from club to club
-Compatible with vice grip 100650,170206,100605*, Golfworks GGS and GW0051
- Some assembly required

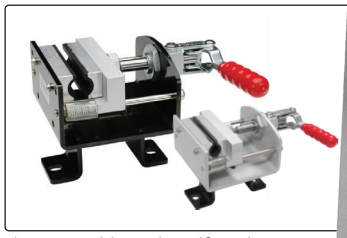




▲Pitch adjustments can be made to the laser to accomodate longer and shorter grips



▲Fine adjustment allows the beam to shine directly over the shaft center line or leading edge of the club as the case may be



▲Compatible with Golfmechanix 100650,170206,100605*, Golfworks GGS and GW0051
