GOLF MECHANIX®

HDI HEAVY DUTY INDUSTRIAL 120905

Professional Heavy Duty Shaft Cutter

An industrial shaft cutter with a proven track record for reliability and safety. We've built well over 30 machines to date, some of which have been highly customized at the operator's request to work within the established production systems.

Our design allows butt and tip trimming of raw shafts as well as fully assembled sets of irons to length using custom jigs. Shafts are nested into cradles and held securely with pneumatic clamps to exclude the possibility of them rolling under the blade. Graphite shafts are cut clean of burrs and splinters without compromising productivity in any significant way.

Compliance with applicable health and safety standards are also met with respect to guarding, dust containment and extraction, noise reduction, electric insulation and integration of safety devices like E-switches.

A new additional refinement to the design is the addition of a dual scale digital ruler where the butt and tip trim are set independently of each other, which can be handy when custom trimming jigs are used for specific sets of club models.

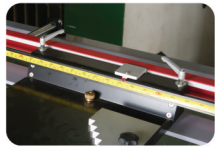
Optional

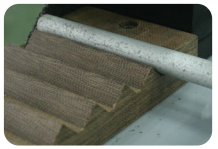
H0801-07
1/4" NPTM
Asian Hi-Flo

Key Features:

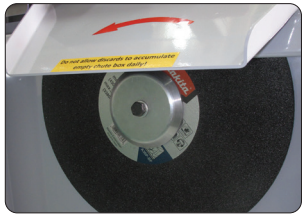
-Industrial strength 2.5 KW motor & hardware
-Cuts nine shafts simultaneously
-Dual acting shaft clamping cylinders

-16” Cut off wheel, 1700 RPM, 400 ft/min
-Dust contained blade guard, 4” ducting
-Standard & custom options available

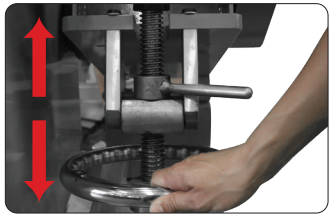




▲ Safety Interlock fitted as standard.

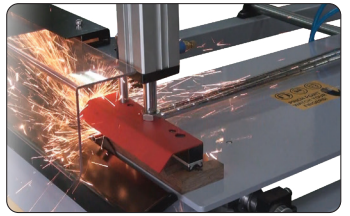


▲ Fully guarded 16” cut off wheel. External chute enhances operator safety



▲ Adjustable blade cut off height, reduces vibration and improves dust containment

▲ Health & Safety compliant electric control panel with integral kill switch and E-Stop



▲ Top guard with spark deflector shield.
