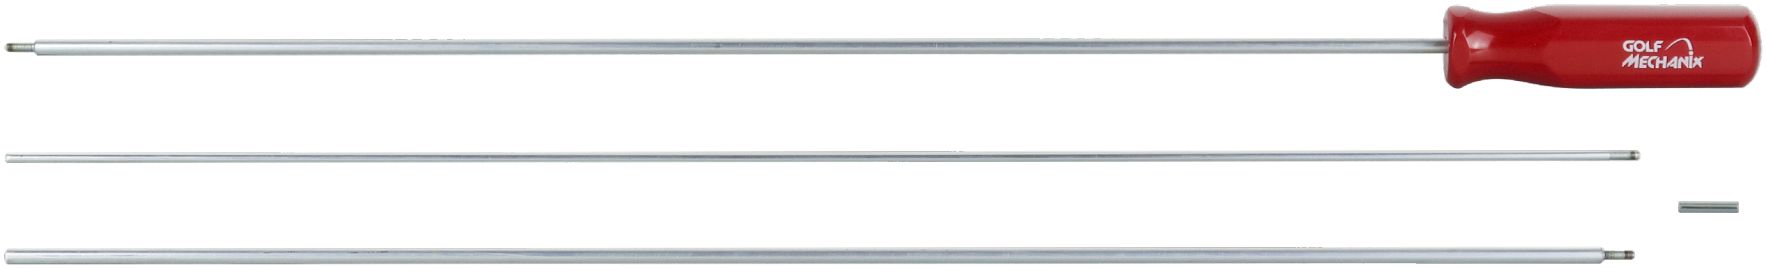
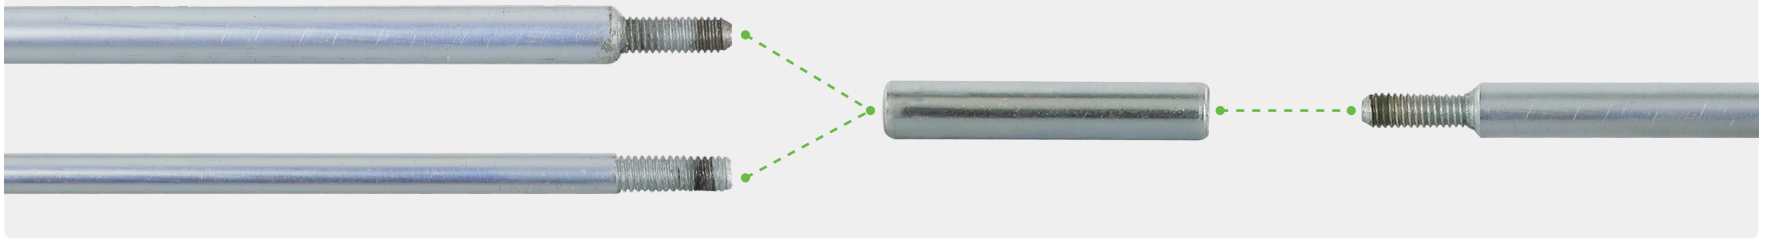
GOLF MECHANIX® 190400

48 Inch Ram-Rod for Steel and Graphite Shafts

The 48" Ram-Rod is perfect for packing cork and lead weight down the shaft and ramming stubborn club-heads that will not easily come off. The main usage of this Ram-Rod, however, is as a heat rod for indirectly heating the epoxy of a club-head, which is useful when the club-head should not be exposed to direct heat. Made of hardened spring steel, the rod will not bend break or kink.



Installation Process



▲Graphite Shaft extender

▲Steel Shaft extender
