

190430 Grip Cap Weight Chute

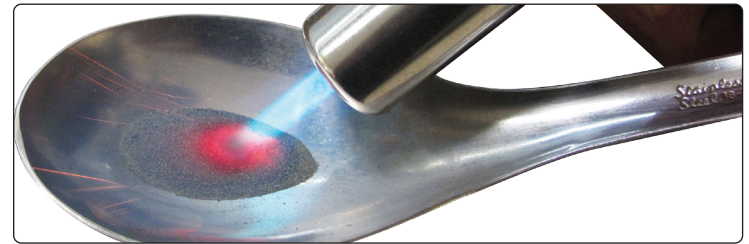

The Grip cap Weight Chute is a handy little tool that permits down-the-shaft weighting without removing the grip.

Mount the sleeve as shown and thrust the stem into the grip vent hole as far as it will go. The sleeve keeps the grip vent hole while the works proceeds.

22-HDTP-4oz Tungsten Powder 1/4 Lb.

High-density tungsten powder comes in handy for making swing weight adjustments internally and is a superior powder for packing maximum weight in minimum space (35% heavier than lead). This high-quality powder flows as smoothly as sands in an hourglass! Easily pours down grip chutes, hosel weight ports, etc. Pour it, pack it, or mix it with epoxy glue or rattle stop to increase swing weight.

Unless adulterated with Lead; Pure tungsten does not melt nor smear!
