22-GB15-2oz *Glass Beads 150 micron Epoxy Filler*

Golfmechanix Shaft Beads are tiny spherical glass oxide granules roughly 150 microns in diameter (0.005"). They are selected specifically for their gap filling ability in shaft-to-hosel bore fits built under current industry standards. Adding glass beads to the epoxy mix reduces viscosity and provides a consistent cushion between the shaft and hosel wall which eliminates the possibility of shafting the club-head off-centre.

Instructions:

Add the beads to mixed epoxy at 5% or less by volume and mix thoroughly. (½ dozing spoon / mix)

The epoxy should not be turned into a putty like mix

Precautions:

WASH HANDS AFTER USE:

Prolonged skin exposure has been reported to cause skin irritation for some people

-DO NOT INHALE -DO NOT DISPERSE

Avoid Eye Contact:

If glass bead enters the eyes, hold eye lids open and flush eyes under gentle running water. **DO NOT RUB!**

To Order:

Economy 2oz jar: #22-GB15-2oz
Value Pack 2oz x6 jar: #22-GB15-2oz-P6
