GOLF MECHANIX®

22-HDTP-4oz *HIGH-DENSITY TUNGSTEN POWDER*

High-density tungsten powder comes in handy for making swing weight adjustments and is a superior powder for packing maximum weight into minimum space (35% heavier than lead).

This high-quality powder flows as smoothly as the sands of an hourglass! Easily pours down grip chutes, hosel weight ports and more. Pour it, pack it or mix it with epoxy glue to adjust swing weight and MOI.

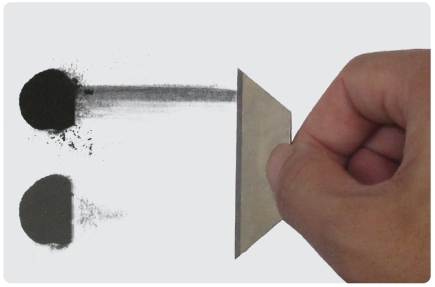
Specifications:

-35% heavier than lead.
-Clump-free powder. Will not cake or oxidize!
-Does not leave smears or residue as lead powders do.
-Non-toxic.

Precautions:

Avoid eye contact. If powder enters the eyes, hold eyelids open and flush eyes under gentle running water for a minimum of 15 minutes.

-Do not inhale.
-Do not disperse.
-Wash hands after use.
-Prolonged skin contact may cause skin irritation for some people.



▲The melting point of tungsten is 3,422 °C . Adulterated tungsten with lead melts at much lower temperature ! Lead powder is a poison and its use is strongly discouraged!

※**Contains approximately 1/4Lb equivalent to 4oz or 113 grams net weight.**
